Metal Locking Service Annual Newsletter
Fall 2003 edition

A New Niche in Buffalo!

We have found that our millwright services are very valuable to many local companies as they downsize their maintenance departments. Recent jobs have shown an ability to work remotely as well - Call us to discuss. Whether it be routine maintenance or an emergency repair, our staff can be counted on around the clock.

The addition of a 3" horizontal boring mill with rotary table and digital read-out has increased our ability to work on smaller jobs, so none are too big or too small.

Our Valued Employees

We are happy to announce that Metal Locking Service recently entered into a multi-year contract agreement with General Electric to be their sole-source provider for cast iron locomotive engine repair for all of North and South America. Our six man crew has met all their internal qualifications and is compliant with their safety program.

Forward Thinking

West Metal Works, Metal Locking Service's parent company has launched its new website. Specializing in superior pressure vessel design and custom fabrication, their customers range from the Department of Defense, Department of Energy to the private sector. At www.westmetalworks.com, you will find the company's diverse capabilities and qualifications, as well as the wide range of industries served and their extensive photo gallery.

NOTEWORTHY: Our customers tell it like it is! Due to the positive response we have been receiving through our customer surveys, we have begun to take it one step further. We have been compiling customer testimonials. This form of advertising is the best that we can ask for, and we thank each and every one of you that has taken the time to write one on our company's behalf.

Quarterly updates to our website, www.metallocking.com, have been made. Please check out our latest projects page.
