Metal Locking Service Annual Newsletter  
Summer 2004 edition

PH: (866) FIX-IRON

**IN THE SHOP** – Trying to keep up with the ever-increasing demand has proven to be no small feat. We are currently going through many upgrades. We are having new concrete poured for our driveway and are also constructing some new office space to make room for another project manager.

This crusher jaw snapped in two pieces and welding it together presented many challenges. The crusher jaw had to be kept hot during the entire repair process, meaning around-the-clock operation. Ultrasonic stress relief completed the repair.

### Latest Technology

Our outside crews are now equipped with the latest Global Positioning Satellite navigational equipment. This will ensure that they arrive at the job site in the quickest time possible!

**Manufacturing Shutdown**-When one of the areas largest manufacturing facilities shuts a line down, time is critical. Metal Locking responded to their needs, providing 34 men for an around-the-clock shutdown. We successfully replaced a complete processing line: from extruding to conveying to curing. Total shutdown length was 36 hours.

**INCREASED CAPABILITIES**-In-Situ Journal turning of this ball mill trunion will save our customer many unnecessary bearing replacements in the future. The upgrade in performance was so great that our customer scheduled a second unit for the same repair.

### On-site Repair to Press Frame

The white area highlights the cracks

When a competitors repair failed, in San Antonio, Texas, we were called in to clean up their mess. This press was repaired properly and given our standard warranty.

Cracks completely sealed & press repainted

NOTEWORTHY: Metal Locking Service can now be reached toll free, 24 hours a day. Call 866-FIX-IRON (866-349-4766) with your cast iron repair or industrial maintenance needs.
