

Permanent Dependable Repairs

**Experience
And
Know How**

Pays Off

A Cast Iron embossing frame, from a prominent paper company, broken during operation. Looking for "Any Port In A Storm" repair, the customer uses a strap to hold the piece in place until a **Permanent** repair could be effected.

**Now Much
Stronger
Than The
Original
Casting**

Broken piece (in foreground) could not be effectively re-attached. A new steel section was fabricated and metal locked into position. Post repair machining has regained alignment. Casting was chalked to show permanently repaired area.

Note: Repair areas have been chalked up for contrast. Finished surfaces are actually difficult to detect.
